

Specimen holders for all specimen shapes and sizes.

Specimen holders for mounted, unmounted or irregular specimens.

Interchangeable from one machine to another.

Holders available in 140, 160 and 200 mm dia.

Stainless steel or light-weight aluminium holders.

Dual clamping for increased capacity.

Up to 12 specimens can be clamped at a time.

Adjustable hole diameter provides increased flexibility.

Save valuable time by easy and fast clamping.

**Specimen holders for
unmounted or mounted
specimens of all
shapes and sizes**

The basis of a perfect preparation

Automatic preparation of materialographic specimens requires a level clamping of the specimens in specimen holders.

Struers offers a wide range of specimen holders for clamping of 3 or more mounted or unmounted specimens.

All kinds of shapes and sizes can be clamped.

All specimen holders have the same type of coupling, which makes them interchangeable from one Struers machine to another.

The range of specimen holders includes 140, 160 and 200 mm dia. sizes in both stainless steel and aluminium.

Holders for mounted or unmounted specimens

For mounted, unmounted or irregular specimens, Struers offers a number of special specimen holders with teardrop or rectangular holes.

Specimen holders with rectangular holes can hold specimens up to 70x53 mm and you avoid having to cut the specimen into smaller pieces.

Specimen holder with clamps

All kinds of shapes and sizes can be clamped in Struers specimen holders

The specimen holder with rectangular holes can hold specimens up to 70x53 mm

This holder comes in handy when you need to clamp wire ends or plates.

Three individual, detachable clamps are fitted on a specimen holder.

This allows for easier fixing of several specimens, preparation of both faces, and even cutting of specimens fitted in the clamps prior to preparation.

Specimen holder with clamps

Tailor-made solutions

Plane, blank specimen holders for adhesion of typically large plane parallel specimens are also available.

These specimen holders are also used to produce tailor-made solutions for customers with special requirements.

Application

For high capacity machines like MAPS or AbraPol machines, holders with a diameter up to 200 mm can be used.

On Tegramin-30, 160 mm diameter holders are recommended but holders up to 200 mm can be used.

On Tegramin-25, 140 mm diameter holders are recommended but holders up to 160 mm can be used.

Specimen mover plates

Struers offers a wide range of specimen mover plates for preparation of single specimens.

Dual-Clamping - saves time and increases your capacity

One screw fastens 2 specimens

Struers programme also includes light-weight aluminium specimen holders designed with a dual-clamping principle: One screw fastens two specimens. This feature facilitates faster clamping and increases the capacity of the specimen holder.

Dual-clamping also allows a certain tolerance for the specimen diameter, which makes these specimen holders well suited for all specimens.

The specimen holders are available in three different sizes, 140, 160 and 200 mm dia., and can hold up to 12 specimens at a time.

Dual-clamping - two specimens are fastened with a single screw

Uniforce - for fast and accurate levelling

Efficient clamping of the specimens saves valuable time in the following preparation steps.

With Uniforce Struers offers fast and accurate levelling of specimens in 140, 160 and 200 mm dia. specimen holders. Precise levelling will reduce your plane grinding time to a minimum and ensure the best possible conditions for quick metallographic preparation of high quality.

With Uniforce, the projection of specimens from the holder can be adjusted to 3 or 6 mm, with 3 mm being the standard.

For more detailed information on Uniforce, ask for a separate brochure.

Uniforce
